

Bomanite®

Con4m

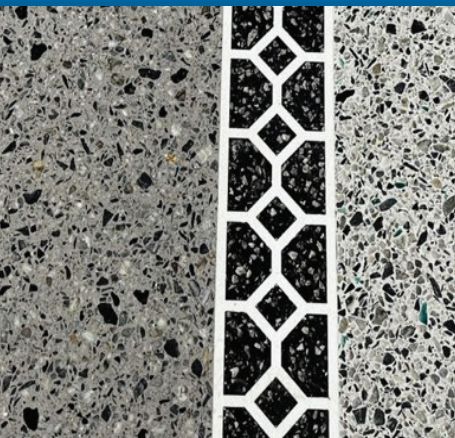

Unique. Repeatable. Bold.

Bomanite Con4m™ is a highly customizable molded divider strip product designed to augment or replace traditional terrazzo type hand bent zinc patterns and graphics used for flooring. Unlike zinc strips or other soft metals that are manipulated to create a pattern, Bomanite Con4m is a cast product using specialized molds to create the various patterns needed for any given project. Made from a semi-rigid polymer, Con4m can incorporate a variety of small aggregates and a multitude of colors within the strip that are exposed during the grinding process. Designed specifically for projects with large numbers of repeating components, Bomanite Con4m is a cost effective and highly decorative alternative to one off patterns. This makes Bomanite Con4m the perfect choice for all applications including entries, municipal or public works projects, hospitals, educational facilities, museums, and more.

Bomanite®

Con4m

REALIZE The Possibilities.

Color and Aggregates Rejoice

Bomanite Con4m offers a much broader palette of colors than conventional divider strips. Utilizing light fast pigments and colored aggregates, the Bomanite Con4m strips and graphics can be unique to each installation; either complementing or boldly contrasting the surrounding terrazzo or concrete topping. Available in widths starting at 1/4" wide and up to whatever width desired, along with the standard 1/2" thickness plus custom thicknesses as needed by the thickness of the floor being installed, the Bomanite Con4m product conforms to your design requirements refreshed surface.

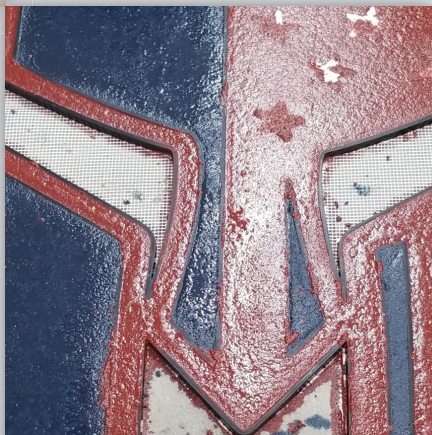

Challenge Met

Conventional soft metal strips tend to darken the surrounding concrete topped floor during the polishing process. Industry standard extruded plastic terrazzo strips do not have this issue and work very well for the application. However, extruded plastic strips are straight and cannot be bent or manipulated into patterns the same way zinc can. Bomanite Con4m solves this issue, taking the best from both products – the ability to be polished with minimal marking from the fine diamonds while being able to be designed in virtually any configuration imaginable.

Insist on Bomanite

Bomanite Con4m is crafted from high quality resins and light fast pigments with carefully selected aggregates blended in at time of mixing and casting. Each batch has sample retains to ensure consistent verifiable colors from strip to strip or graphic to graphic. Installed in a manner like terrazzo strips, any well qualified terrazzo or concrete topping applicator can use Bomanite Con4m to produce a highly decorative project. Be sure to contact Bomanite or any Bomanite Licensed representatives to discuss your next epoxy terrazzo, self-leveling overlay, or concrete topping project.
