Free4m

Encaustic Cement Tile Meets Bomanite Ingenuity

Bomanite Free4m™ is a unique approach to creating seamless or butt joint type flooring similar to the look of encaustic tiles – but without the size restraints. Crafted from a semi-flexible polymer matrix cut to whatever pattern is desired, Bomanite Free4m allows for endless design possibilities. Unlike traditional projects that must repeat or are subject to significant forming expense, Bomanite Free4m can be customized over every square inch of your next polished self-leveling overlay, or topping project. This makes Bomanite Free4m™ the perfect choice for all applications including entries, municipal or public works projects, hospitals, educational facilities, museums, and more.

Bomanite®

Free4m

REALIZE The Possibilities.

Sharpen Your Pencil

Bomanite Free4m™ allows designers the ability to install what they draw – to express their designs in a free flowing and fluid way not previously possible on large scale. Customized forming techniques have generally been limited in size and scale due to the intense labor burden needed to hand cut and form onsite. Now the cutting forming process is available to be completed offsite with the only need onsite to apply the Bomanite Free4m stencils in place. Expose the sticky adhesive found on the forms and place them in alignment. Weed your first color and you are on your way to creating something special.

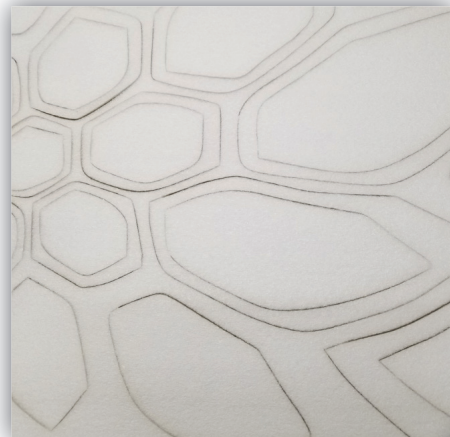

Fast, Effective, Decorative

Conventional graphics and patterns used in self leveling overlay and topping floors are created using terrazzo strips hand bent and bonded to extruded metal. Water jet metal is another common approach. Expensive. Slow. Limited. And every seam in the floor is a strip of exposed metal – a divider strip that may be a desired part of the design - or maybe not? Bomanite Free4m cast in place flooring allows you to eliminate these other products and instead pour color against color with no dividing strip or color change in between. Imagine an Encaustic cement tile thousands of feet in size? That's the possibility when using Bomanite Free4m.

Insist on Bomanite

Bomanite Free4m™ is crafted from a high-quality resin matrix using computer driven cutting machines. Detail down to ½" is possible with any shape or pattern you can draw being reimaged in the floor pattern. Typically drawn in CAD or other design software, Bomanite Free4m is cut to shape, numbered to match the drawings you provide, and shipped in sequence to make it easy for the applicator to pull and install forms in an effective manner on the jobsite. Be sure to contact Bomanite or any Bomanite Licensed representatives to discuss your next epoxy terrazzo, self-leveling overlay, or concrete topping project.
