MICRO-METEL

Imagine

Built as Nature Intended

Bomanite Micro-Metel™ is a combination of metal and other aggregates that are designed to be mixed with acrylic, epoxy, and Polyaspartic resins. Once placed it is then ground and coated. A natural patina will develop on exterior applications and interior applications can be chemically patinaed prior to final sealing. Iron, brass, bronze, copper, and zinc are available in fine and coarse blends. Typical applications are graphics and letters in both horizontal and vertical formats, however larger applications such as floors and paving are possible. Bomanite Micro-Metel can be applied over all concrete surfaces in addition to properly prepared wood, steel, or other structurally sound and stable substrates.

MICRO-METEL

REALIZE The Possibilities.

Beauty From Age

Exterior Bomanite Micro-Metel overlays will patina with time; changing in appearance and developing deeper and richer color as the surface oxidizes. This is due to the vapor permeable resins the metal is bound in, which allows the topping to “breathe” naturally, however very slowly. This minimizes the possibility of freeze thaw damage while still allowing for oxidation. Like a copper roof, bronze statue, or steel siding, Micro-Metel will develop the patina associated with the metal within.

Wrought Through Refined

Interior projects that do not require the patinaed effect can be coated to protect the metal, maintaining the machined appearance of the Micro-Metel as a honed or polished finish; or even as a coarse ground wrought iron. With differing gradations due to the particle size of the metal and the additives needed for mixing and troweling, Micro-Metel can have a range of textures and looks. A clear coating is applied once installed to maintain whatever finish has been sampled and specified for any given project.

Creative Minds

The design uses are endless from logos and messages communicated through embossed Micro-Metel letters to entire floors, walks, or walls of aged metal. The possibilities are limitless. Consult with Bomanite to receive samples and supporting information including specifications and physical property data for your next topping project.

Insist on only the best. Insist on Bomanite Toppings Systems.

When you choose a Bomanite Toppings System rest assured that the application will be handled by a highly skilled and specially trained licensed Bomanite Contractor who will work with you to create unsurpassed, high-quality concrete flooring systems.
