SANDSCAPE REFINED

Imagine

Colorful. Versatile. Durable.

Bomanite Sandscape Refined is an architectural exposed concrete with a very fine exposure depth using the non-native quartz aggregates found in Bomanite Color Hardener. The Sandscape Refined System utilizes specialized concrete mix designs, dry shake color hardener, topical treatments and advanced application procedures to produce a finished product that showcases the fine aggregate. The final product is a unique alternate to other decorative concrete finishes while producing a monolithic concrete slab with a low life cycle cost due to the pre-aged nature of the surface.

SANDSCAPE REFINED

REALIZE The Possibilities.

Sustainable

Bomanite SandScape Refined is an engineered product primarily for outdoor applications. The finished SandScape Refined product resembles fine textured stone or etched limestone block with light sand exposure throughout the surface. SandScape Refined is installed onto the surface of wet concrete (horizontal or freshly placed vertical) with the specialized hardener completely covering the surface and eliminating the appearance of local sands in the mix. The final product is an economical alternate to natural stone or architectural pre-cast concrete while producing a monolithic concrete pavement with a low life cycle cost due to the preaged nature of the surface. Applications include plazas, shopping centers, schools and exterior walkways - anywhere improved wear resistance for light- to moderate-duty vehicular or foot traffic is necessary. These highly durable surfaces are available in a multitude of standard and custom options; including light-reflective formulations that reduce heat island effect.

Robust

SandScape Refined is suited for use anywhere that improved wear resistance for light- to moderate-duty vehicular or foot traffic combined with an architectural finish is necessary. Due to the use of Bomanite Color Hardener, these highly durable surfaces are available in a multitude of standard and custom colors, including cost effective light-reflective formulations that do not require the use of white cement to reduce heat island effect. SandScape Refined by Bomanite is intended for both new construction and major renovation projects. SandScape Refined is most commonly installed as full depth slab on grade pours along with un-bonded thick section toppings 3" or greater in thickness over membrane applications. The specialized design of the dry shake hardener along with placing and finishing are critical to the success of the finished product.

Customizable

Typically applied products such as Bomanite Con-Color and Chemical Stain are compatible with SandScape Refined. Consult the applicable technical bulletins for further information on these products and systems. Consult the Bomanite SandScape, Alloy and Revealed System Guidelines for additional exposed aggregate options.

Installed By The Best

Bomanite SandScape Refined is installed utilizing carefully crafted Bomanite application procedures by trained and licensed applicators that specialize in architectural concrete installations. Consult with your local Bomanite Exposed Aggregate Licensed Contractor for color charts, standard and custom samples, additional color and aggregate combinations or feel free to contact Bomanite to discuss your project needs.
